AMENDMENTS TO THE CLAIMS

- (currently amended) A method for processing incoming calls comprising:
 receiving at least first and second incoming calls;
 retaining the first incoming call in a first state;
 waiting until the first incoming call progresses to a second state;
 answering the second incoming call and placing it in the first state after the first
 incoming call progresses to the second state; and
 transitioning the second incoming call in the first state to a second state;
 starting a timer when placing the second incoming call in the first state; and
 hanging up the second incoming call and placing it in a third state if the timer expires.
- 2. (original) A method as recited in claim 1 wherein the first state is a pending answer state and the second state is a call connected state.
- 3-4. (cancelled)
- 5. (currently amended) A processor-based videoconferencing station comprising a medium storing instructions for causing the processor to:

receive at least first and second incoming calls;

retain the first incoming call in a first state;

wait until the first incoming call progresses to a second state;

answer the second incoming call and place it in the first state after the first incoming

call progresses to the second state; and

transition the second incoming call in the first state to a second state;

start a timer when placing the second incoming call in the first state; and

hang up the second incoming call and place it in a third state if the timer expires.

6. (original) The station as recited in claim 5 wherein the first state is a pending answer state and the second state is a call connected state.

7-8. (cancelled)

- 9. (currently amended) A processor-based video conferencing station comprising: a receiver for at least first and second incoming calls;
 - a memory for maintaining the state of each incoming call in at least first and second states; and
 - an analyzer for retaining the first incoming call in a first state; waiting until the first incoming call progresses to the second state; answering the second incoming call and placing it in the first state after the first incoming call progresses to the second state; and

transitioning the second incoming call in the first state to the second state; starting a timer when placing the second incoming call in the first state; and hanging up the second incoming call and placing it in a third state if the timer expires.

10. (original) The station of claim 9, wherein the first state is a pending answer state and the second state if a call connected state.

11-12. (cancelled)

- 13. (new) The method as recited in claim 1, further comprising:
 starting a timer when placing the second incoming call in the first state; and
 hanging up the second incoming call and placing it in a third state if the timer expires.
- 14. (new) The station as recited in claim 5, wherein the medium further stores instructions for causing the processor to:

start a timer when placing the second incoming call in the first state; and hang up the second incoming call and place it in a third state if the timer expires.

15. (new) The station of claim 9, wherein the analyzer is further for:
starting a timer when placing the second incoming call in the first state; and
hanging up the second incoming call and placing it in a third state if the timer expires.
